

Condition-specific Benign versus DoS classification

Cells report the number of valid responses and the percentage within each true class. DoS is the positive class.

(a) Structured JSON
n = 179 valid responses

(b) Deterministic text
n = 180 valid responses

Note: Structured JSON uses 179 valid responses; deterministic text uses 180. The 40 timeouts and one schema-invalid response are preserved as coverage outcomes and are not treated as classification errors.
