

# Paired classification outcomes across 178 complete samples

Off-diagonal cells show which representation was uniquely correct for the same network-flow record.

**Exact McNemar  $p = 0.0436$  | Accuracy difference (structured – text) = +0.079**

Positive differences favour structured JSON. The exact test uses the 42 discordant pairs (28 structured-only correct; 14 text-only correct). Timeouts and invalid responses are excluded from this complete-pair comparison.
