

Supporting-baseline out-of-fold classification

Five-fold stratified evaluation on the same 200 samples and locked 46-feature table.

(a) Logistic Regression
n = 200 out-of-fold predictions

(b) Random Forest
n = 200 out-of-fold predictions

Cells report counts and percentages within each true class. DoS is the positive class.

Logistic Regression made five DoS false negatives; Random Forest made no observed OOF errors.
